CAREER OBJECTIVE

Business Information Systems student with a background in operations and strategy, now focused on building AI-powered business automations. I design systems that take repetitive, manual processes the kind that quietly consume hours of a team's week and turn them into single-click flows that run on their own. My edge is sitting in both worlds: I understand how a business actually operates, and I can build the automation that fits it, instead of forcing a generic tool onto a problem that doesn't suit it. Looking for roles where business understanding and automation skill combine to design AI-driven solutions that give companies more output, lower cost, and more time for the work that genuinely requires human judgment.

EDUCATION

Business Information Systems (BIS) - Helwan University

Level 4 Student | Expected Graduation: June 2027

WORK EXPERIENCE

Pollion | January 2026 - Present

Growth Marketing Team Lead | January 2026 - April 2026

- Managed and coordinated the growth marketing team, overseeing full execution of lead generation and outreach strategies.
- Planned and launched targeted email marketing campaigns, consistently meeting prospect identification and lead generation targets.
- Supervised the end-to-end outreach cycle, from initial prospecting to converting high-potential opportunities into the sales funnel.
- Maintained a consistent pipeline of 1,000+ qualified leads through structured international outreach programs.
- Coached team members on growth marketing tools and best practices to drive top-of-funnel growth across global markets.

Tech & Marketing Team Lead | April 2026 - Present

Marketing and Lead Generation Automation

- Diagnosed the full lead generation and email marketing operation, identified the highest-cost manual steps, and rebuilt them as a single-click AI-driven system.
- Replaced a workflow that consumed around 40 hours a week across a 6–8 person team with an automated end-to-end process freeing the team for higher-value work.
- Architected a 60+ node AI Lead Generation Agent in n8n with AI title expansion, Bright Data web scraping, GPT-4o-mini enrichment, a 4-gate validation framework, and a 5-star ranking system exhausting every qualified lead matching the defined titles, industry, and country with no per-cycle cap.
- Built automated verification and enrichment workflows with MillionVerifier and Apollo, ensuring 95% deliverability before any lead reached a campaign.
- Redesigned the email sequences and campaign visuals, then automated delivery through Brevo and Instantly turning weekly setup into a one-time configuration, with automatic unsubscribe and hard- bounce cleaning.
- Managed the company's digital presence and LinkedIn strategy, evaluating every automation on ROI before building and declining low-return projects in favor of leaner alternatives.

Inspector Pulse AI Agent

- Built an AI agent that investigates completed projects by connecting company system records with project communications and client feedback, turning scattered evidence into structured performance assessments.
- Designed assessments around quality, deadline performance and communication, linking findings to supporting evidence so managers can understand the reasons behind each evaluation.
- Identifies project issues and contributing factors, flags conflicting evidence for review and updates assessments as new feedback arrives to support corrective action and prevent recurring problems.

AI Assistants and Team Systems

- Built role-specific AI assistants that combine case history, personal memory and company guidance, helping team members retrieve relevant context and continue work without repeatedly explaining previous cases.
- Connected assistants to work tools to handle repetitive operational tasks, reducing manual effort and freeing team members to focus on work that requires their judgment.
- Hosted assistants on a VPS with separate employee accounts and private memory, enabling scheduled tasks to run independently of employee devices while providing access to shared company knowledge.

Ermis Project Management and Team Leadership

- Managed daily project delivery and vendor coordination, translating client requirements into task assignments, priorities and follow-up actions to keep the team aligned with delivery expectations.
- Recruited, onboarded and trained contributors, clarified project guidelines and supported the team through client feedback and rework, helping the team exceed the project target.
- Combined project leadership with hands-on annotation, adjudication and quality review, coordinating directly with Argos and vendors to resolve issues and keep work moving toward deadlines.

Localization Engineering Projects

- Assessed localization project requirements and selected suitable tools and workflows for transcription, translation, DTP and voice-over work, adapting the technical approach to each assignment.
- Applied AI-assisted tools and technical quality checks to resolve complex production challenges, improve output quality and reduce avoidable manual work and production costs.
- Performed quality assurance on language content, formatting and file structure, identifying issues before delivery and streamlining production to help teams deliver higher-quality work ahead of deadlines.

KRIJO Media Agency July 2025 – May 2026

Business Development Specialist July 2025 – December 2025

- Developed and executed targeted business strategies that drove consistent monthly revenue growth for the agency.
- Built a full business plan covering market analysis, financial planning, and operational frameworks from inception.
- Designed and implemented a structured workflow system that improved team productivity and delivery standards.
- Restructured team roles by defining clear responsibilities, establishing KPIs, and aligning positions with organizational goals.
- Created and executed a growth strategy to strengthen the agency's on-ground presence and social media performance.
- Introduced a CRM system for the sales team to improve pipeline visibility and client relationship management.
- Built an automated data organization system for the sales and business development teams, improving reporting accuracy and efficiency.

Operation & Business Development Coordinator December 2025 – May 2026

- Oversaw all agency operations and served as the final approval point for client deliverables, ensuring consistent quality standards.
- Managed project timelines, task allocation, and cross-team coordination across all active client projects.
- Led all internal teams, ensuring alignment between task execution and client objectives.
- Streamlined agency workflows by designing process improvements that increased overall team productivity.
- Defined role responsibilities and KPIs across every position in the agency to maintain accountability and performance.

EXTRACURRICULAR EXPERIENCE

Enactus Project Team Lead Nov 2023 – Sept 2024

- Contributed to planning and executing strategic projects with real-world implementation.
- Gained hands-on experience in strategic planning and project management across multiple project

phases.
